

ACS Demographic and Housing Estimates: 2005-2007
 Data Set: 2005-2007 American Community Survey 3-Year Estimates
 Survey: American Community Survey
 Geographic Area: Romeoville village, Illinois

NOTE. Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties. For more information on confidentiality protection, sampling error, nonsampling error, and definitions, see Survey Methodology.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

-While the 2007 American Community Survey (ACS) data generally reflect the December 2006 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and bound

-Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based c

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations wer
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were avail
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variabilit
